

Key Measures

To qualify for the UNEP certificates and to enter the competition, you will need to show an improvement in three key areas between your Step 1 measurement results and your Step 4 measurement results. These are:

Get Growing Key Measures

- The number of food producing plants your school grows
- The number of students that are involved in growing activities
- The size of your school garden/allotment in m². Growing pots and containers should be accounted for.

Greener Grub Key Measures

- The total number of non recyclables in your lunch boxes
- The total number of food items in lunchboxes that could have been grown locally
- The percentage of food your school sources locally

The Key Reduce Rubbish Measures

- Reduction in the total weight of your waste going to landfill each day.
- Reduction in the percentage of recyclable and compostable waste being sent to landfill
- Reduction in the amount of CO₂ your school produces from sending waste to landfill

We will automatically calculate these for you from the data you input during Step 1 and Step 4.
